

Crossarm system

Self-locking, push fit patented system

The basis for the Crossarm system are our vineyard posts. Using a custom post plan, the cross arm can be installed through the pre-fabricated holes on the sides of the posts. This system ensures a self-locking mechanism once installed.

The Crossarm system allows the user to choose between various arm lengths as well as being able to decide at what height each cross arm needs to be at, and if there are hooks or not on the post.

This unique system is adaptable to different types of fruit trellising, such as soft fruit cultivation or vine nurseries.

Advantages:

- ✓ Nuts and bolts not required
- ✓ Self-locking, patented system
- ✓ Quick installation
- ✓ Lightweight
- ✓ No maintenance required
- ✓ Reusable
- ✓ Consistent quality
- ✓ Robust
- ✓ Customisable post plan
- ✓ Post available in Z350 or Hot Dipped Galvanised

2 notches / crossarm length 152,4mm / 6in

4 notches / crossarm length 304,8mm / 12in

4 notches / crossarm length 457,2mm / 18in

6 notches / crossarm length 609,6mm / 24in

6 notches / crossarm length 762mm / 30in

8 notches / crossarm length 914,4mm / 36in

Installation depth table

Length of posts [cm]	Recommended installation depth [cm]
140	40-45
160	50
180	55
200	60-65
220	65
230	70
240	70
250	70-75
260	80
270	85
280	90
300	95

Profil Alsace trellis and fruit growing systems are made from high quality, industry standard steel, manufactured with a strict quality control process. This guarantees the durability of our products over time.
